a Vertical Leap company

Dynamics NAV Versions: 4.0, 5.0, 2009, 2013, 2015, 2016, 2017 – Languages: English – Countries: Any

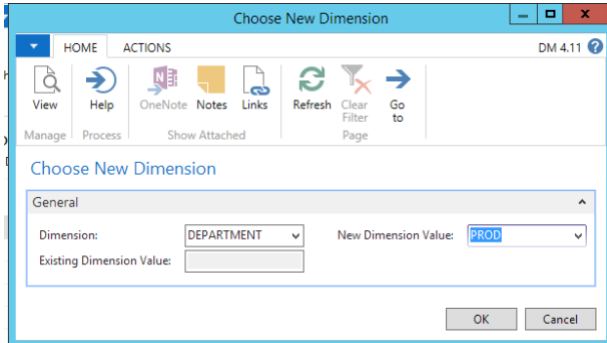

Price: Contact us for pricing information

## Change dimensions on posted documents and transactions and update historical transactions with new dimensions

- Add or change dimensions without having to reverse out and recreate documents and transactions.
- Create and assign new dimensions to customers, items, and vendors.
- Report on historical data by updating dimensions.

## Posted transactions and documents

Use this addon to add, change, or delete any dimension values on either posted transactions or posted documents. This is especially helpful when users accidentally forget a dimension or assign the wrong dimension during posting. Users can update any transaction with new or corrected dimensions without going through the long, tedious process of reversing transactions and posting corrections.

***Two easy ways...simply open a document, navigate, and select "Change Dimensions", or batch change dimensions on multiple documents using a filtered list***

## New dimensions on historical transactions

Reports are based on dimensions! If transactions are posted with incorrect or missing dimensions, reports will be inaccurate and worthless. Save time and money by simply making corrections!

Delete dimension-related entries in Analysis Views and rebuild the data with corrected dimension values.

## All ledgers are updated

- All items in the NAVIGATE window are updated.
- When you NAVIGATE on a Ledger Entry, all related entries are updated.
- When Change a Dimension on a Ledger Entry but DON'T Navigate, Only the Ledger Entry is changed

Contact your local provider to order now. For more information call, e-mail or visit our website:

## Audit trail

When users make changes to dimensions, a complete history of those changes is retained. All historical information is available, including:

- When the change was made.
- Who made the change.
- What the dimension was before it was changed.
- What the dimension was changed to.

Line No.	Table No.	Table Name	Source Table No.	Source No.	Source Line No.	Old Code	Old Value	New Code	New Value	Old Value
1000	112	Sales Invoice Header	0	103001	0	DEPARTMENT	SALES	DEPARTMENT	PROD	
2000	113	Sales Invoice Line	0	103001	10000	DEPARTMENT	SALES	DEPARTMENT	PROD	
3000	113	Sales Invoice Line	0	103001	20000	DEPARTMENT	SALES	DEPARTMENT	PROD	
4000	17	G/L Entry	0	2000	0	DEPARTMENT	SALES	DEPARTMENT	PROD	

## Safety

If a dimension value was changed in error, an “Undo” function is provided that creates a reversing entry and restores the original values.

Users may opt to disallow changes to dimension values on data in “Closed Periods” to prevent altering published reports.

## Ease of use

By using Dimension Management you can improve your analysis and reporting by updating dimensions. Save time and effort by updating old transactions with correct dimensions.
