Optional Rate Quoting and Address Verification

This addon allows you to verify customers' ship-to addresses. Carriers charge a fee to correct addresses that have misspellings, typos, missing apartment numbers, and other minor mistakes. Failing to mark an address as "Residential" can also lead to a penalty. Shipping verification saves you money by eliminating these problems.

It also provides customers with an automatic quote for shipping charges. If a customer pays for an order by credit card, a freight line must be in place before a credit card authorization can be requested. Rate quoting allows customers to select a shipping option before the order is processed. Simply enter the number of packages, dimensions, and weights. Then the customer may compare charges and services from available carriers and make their selection.
